

14 June 2019

IER, specialists in charging infrastructure for electric vehicles, introduces its new solutions at the Salon des Maires d'Ile-de-France trade show

Smart E-Charger

The Smart E-Charger, part of the latest generation of charging points, designed for charging all types of vehicles, for on-street or car-park charging, offers a smart charging solution for all public and individual electric car users. It is specially adapted to perform in difficult urban conditions (corrosion and damage) and is suitable for intensive use.

The Smart E-Charger is fitted with two charging points so that two vehicles can be charged at the same time, and is intuitive and easy to use, with visual signalling in different colours to keep users informed during all stages of charging.

The Smart E-Charger is a product of IER's expertise in the design, manufacture and distribution of charging points for major air, train and urban transport networks. It is manufactured in Besançon with French components, and meets the requirements of current safety standards.

UPGRADE MODULE FOR AUTOLIB' CHARGING STATIONS

IER has designed a charging point upgrade solution for municipalities within the Ile-de-France region that are looking to overhaul their existing charging stations, so that local authorities can refurbish existing charging points while still providing residents with a charging service for their electric vehicles. IER's 981B module offers an economical, environmentally responsible, fast and reliable alternative for upgrading existing charging points, with the possibility of doubling charging power (from 3.7 kW to 7 kW) without altering the electrical architecture of the charging points.

As the producer of these charging points, IER is best positioned to carry out the modifications required to update to the latest technology, ensuring compliance and certification in line with current electrical safety standards,

prolonging the product life cycle at a reduced cost and in a safe manner. IER has all the designs and spare parts required to upgrade this equipment, while guaranteeing the provision of a continued charging service.

About IER:

IER is the perfect partner for all mobility solutions, guaranteeing a turnkey service that comprises the installation, repair and maintenance of charging points, a field in which IER has established itself as a market leader since 2010 with over 10,000 charging points for electric vehicles rolled out in France and abroad. IER's solid expertise in charging solutions has established it as a key player in new mobility solutions, and its charging solutions also offer interoperability with all charging operators (OCPP 1.6), ensuring maximum adaptability.
